

Edge®
Single monitor arm

Edge-Max
Heavy-duty single monitor arm

Edge2
Dual monitor arms

Evolve2-MS
Dual monitor arm on 16" pole

Benefits of monitor arms

Effortless adjustment

Provides proper height, angle and direction adjustment for ergonomic viewing by one or many users.

Arm extension

Provides placement of monitor at desired viewing position closer to or farther from user for viewing. Retracts to remove monitor from users working space when no longer in need for keyboarding, increasing work area.

Desktop clamp or grommet mount

Provides the choice of mounting options based on work surface and placement of monitor.

VESA 75mm and VESA 100mm plates

Provide the ability to mount 99% of all flat screen monitors manufactured (VESA: Video Electronics Standards Associates).

Additional monitor mounts

Provide the ability to increase the number of monitors by modifying existing equipment.

Benefits of multiple monitor arms

Increased productivity

Dual monitors can increase productivity in the workplace by 20%–50%. By using two monitors, the available screen area for running applications is effectively doubled which creates many benefits. Users are able to have multiple projects on their desktop at the same time.

Comparing is easier

Comparing sets of data becomes a lot easier when there are two monitors. There are many situations when an employee will need to compare two spreadsheets, documents, websites, images, or other electronic documents. By placing each document on a separate monitor, this task becomes as easy as comparing two pieces of paper held side by side.

Better for the environment

Utilizing dual monitors for comparing data instead of printing the documents eliminates wasted paper.

Ability to multi-task quickly and efficiently

Users will be able to work faster and more efficiently with two monitors.
