

# BENEFITS OF LED TASK LIGHTING

LED bulbs are directional. They drive their light in one direction, unlike compact fluorescents, which emit light in all directions.

## ADDITIONAL BENEFITS

### ENERGY-SAVING

LEDs use a fraction of the wattage of incandescent bulbs. These bulbs last for years, energy is saved in maintenance and replacement costs. Electricity costs can be reduced by 80% or more.

### LONG-LASTING

LED bulbs last up to 10 times as long as compact fluorescents.

### COOL

These bulbs do not cause heat build-up; LEDs produce only 3.4 btu's/hour.

### DURABLE

Since LEDs do not have a filament, they are not damaged under circumstances when a regular bulb would be broken. Because they are solid, LED bulbs hold up well to jarring and bumping.

### MERCURY-FREE

No mercury is used in the manufacturing of LEDs.
