# Railway

power and data solution

The table below can be used to learn the quantities of each component provided with your order. The minimum number of rails is shown for each configuration. Additional rails may be added in-line to any of them. Use the "additional rail(s)" column to calculate the number of added components per additional rail. Bullpen configurations are configured as a 90° plus an additional rail with a 90° post instead of a 180° Be sure to read the important notes under the table for further details related to the configurations.
